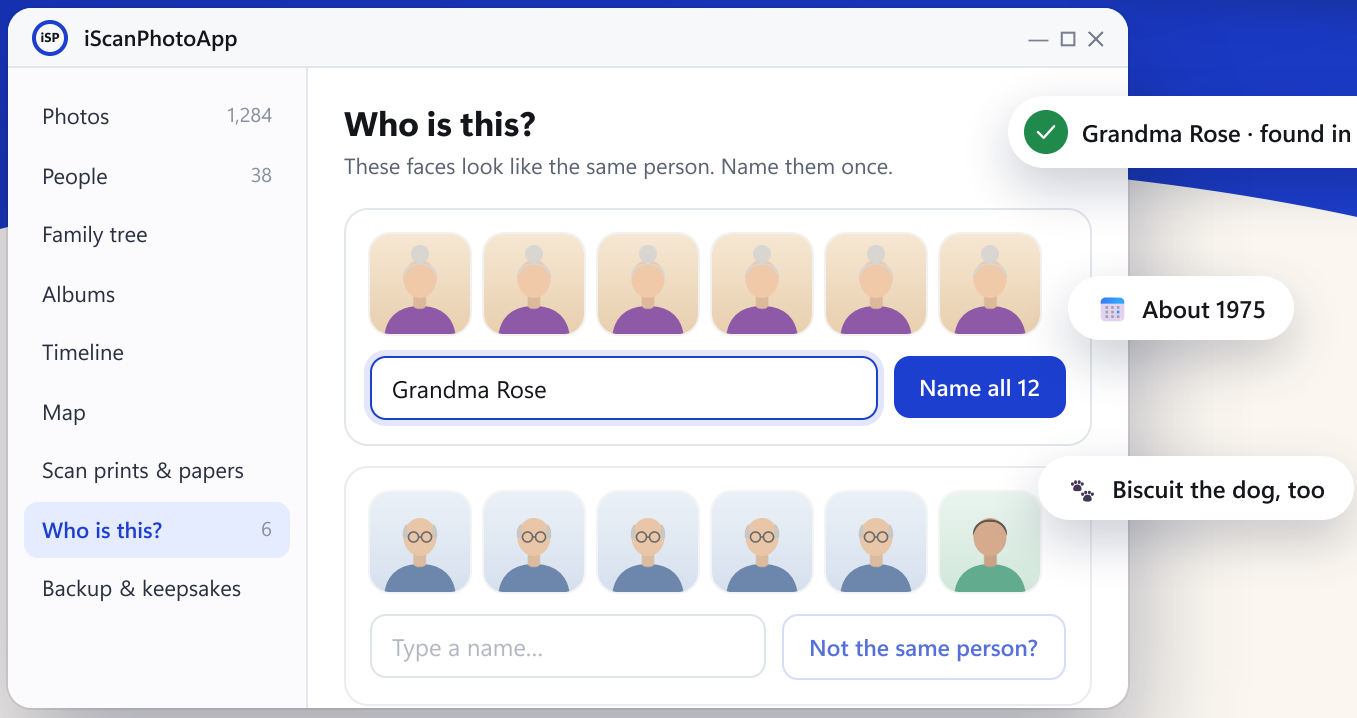
iScanPhotoApp
The family photo organizer for Windows

Every face. Every story. *Finally found.*

Shoeboxes, phones, old hard drives: iScanPhotoApp brings them all together, finds every face, asks who they are, and remembers. For your family, and for the generations after.



Pay once, keep it
No subscription. No monthly fees.

Private by design
Your photos stay on your own PC.

Try it free
30 days, every feature, no card.

For Windows 10 and 11

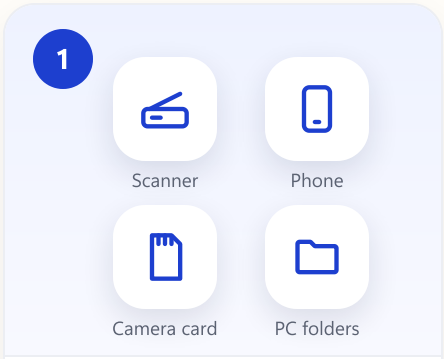
HOW IT WORKS

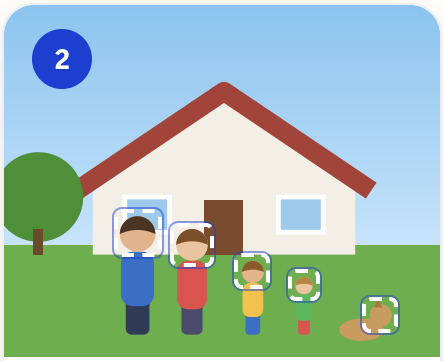
From shoebox to *search box.*

Most families have thousands of photos and nobody left who knows every face. iScanPhotoApp does the sorting for you, so the people who remember can spend their time remembering.



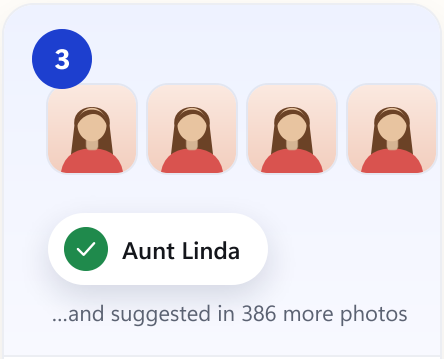
Bring everything in

Scan prints right in the app, send photos from your phone over Wi-Fi, or add a camera card or the folders already on your PC. iPhone photos, camera RAW and videos too.



It finds the faces

iScanPhotoApp looks through every photo and groups the faces that belong together, pets included. It all happens on your own computer.



Name them once

Type a name once and the whole group is done. iScanPhotoApp suggests that person across the rest of your library, and you always have the final say.

Then just *ask.*

Search the way you talk: by who, where, when, or what's in the picture.

50,000+
photos in one library: room for a lifetime of family pictures.

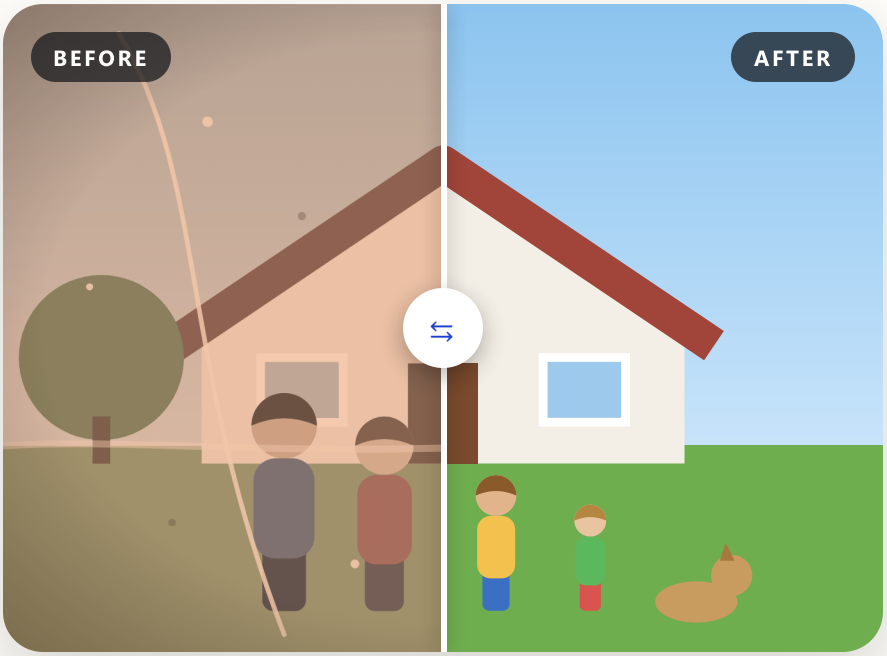
On your PC
Faces are found and matched on your own computer, never uploaded.

"About 1975"
is a perfectly good date. Undated prints are welcome here.

RESTORE & PRESERVE

Bring old prints *back to life.*

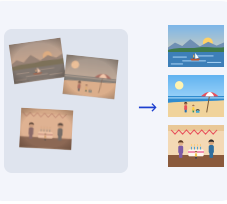
Dust, scratches and faded color, fixed in a click, with a live before-and-after so you can see every change. Your original is never touched: every fix is saved as a new copy, right next to it.



Fixes in a click:

- Remove dust & scratches
- Fix faded color
- Color for black-and-white
- Sharpen & enlarge
- Crop, straighten, brighten

Slide the line to compare before you save. Auto fix brightens dark, washed-out and faded photos in one go.



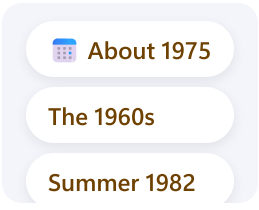
Scan right in the app

Lay several prints on the glass: each becomes its own photo, cropped and straightened, ready to name. Flip them over to keep the handwriting on the back.

negatives → positives

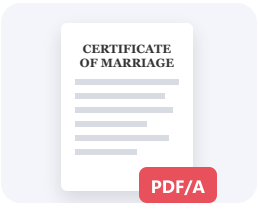
Slides and negatives

Scan film with your scanner's film adapter: every frame becomes its own photo, and negatives turn into true-color positives.



Dates for undated prints

"About 1975" or "the 1960s" works fine. Date a whole batch at once, and your timeline still falls into place.

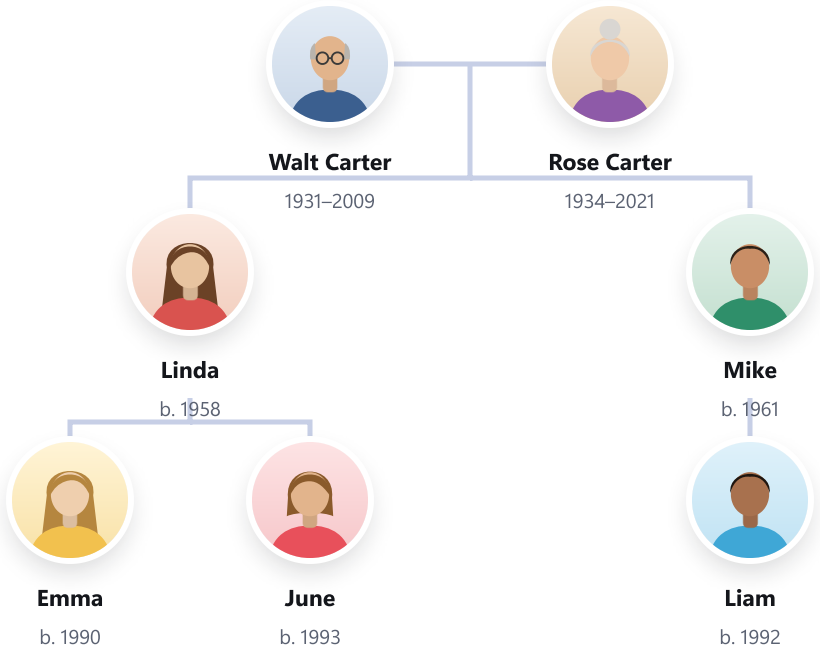


Letters, recipes and records

Certificates, letters and recipe cards become clean, searchable PDFs, in the archival PDF/A format.

FOR THE WHOLE FAMILY

Who they were. *How they're related.* What they had to say.



See it in photos

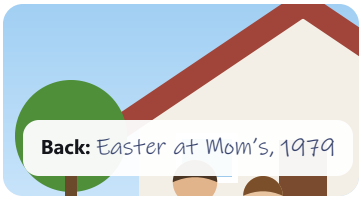
"Photos of Grandma's side" or "three generations together", in one click.

Already on Ancestry?

Bring your tree in, or take it out, as a standard GEDCOM file.

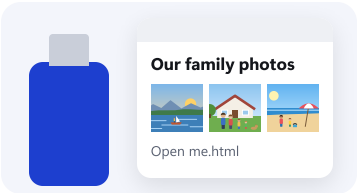
Stories, in their own voice

Type the story behind a photo, or record Grandma telling it. The recording stays with the photo.



The back of the print, too

Scan both sides: the handwriting on the back stays with the photo, along with where the original is kept.



A keepsake for everyone

Put your whole archive on a USB drive for each family member. It opens in any web browser, with nothing to install.

Share between family PCs

Names, dates and albums stay in step between your PCs at home, and with family far away through a folder you already share.

Phone photos over Wi-Fi

Scan a code with your phone and send its photos to your PC. Nothing to install.

Your life on a map

Every photo with a location, on a map that works without internet.

A timeline of your family

Scroll through the decades and watch the kids grow up.

BUILT TO LAST

Your memories stay *yours.*

Family photos are meant to outlive any app, any company and any computer. iScanPhotoApp was built around that from the very first line.

Your originals are never changed

Edits, fixes and restorations are saved as new copies. The photo you started with stays exactly as it was.

Private, on your PC

No account to create and nothing uploaded. Faces are recognized on your computer, and it works without internet.

Backups that check themselves

One click copies everything to an external drive. It quietly re-checks your files for damage and can put back a good copy.

Readable without our app

Names, dates and stories are also saved as spreadsheets, a standard family-tree file, and details other photo programs read.

Archival formats

Documents are saved as PDF/A, made to be read for decades. Backups add long-lasting TIFF copies of iPhone and RAW photos.

Some photos stay private

Mark a photo private and it stays out of keepsake copies and family sharing. Record who took it and its rights, too.

Five years of a photo subscription, or *one price, once.*

Some photo services charge every year, as long as you want to see your own photos. iScanPhotoApp is yours to keep. No subscription, no ads, no account.

Works with: Picasa · Lightroom · Windows Photo Gallery · iPhone (HEIC) · Camera RAW · Videos · GEDCOM

Everything included. No add-ons, no upsells.

- ✓ Face and pet recognition
- ✓ Search in plain words
- ✓ Old-print restoration
- ✓ Crop, rotate and brighten
